Coping With Failure The Therapeutic

Coping is defined as the thoughts and behaviors mobilized to manage internal and external stressful situations.[1] It is a term used distinctively for conscious and voluntary mobilization of acts, different from 'defense mechanisms' that are subconscious or unconscious adaptive responses, both of which aim to reduce or tolerate stress.[2]
Welcome to my mini-course page. In this professional development training, participants will learn the basics of Therapeutic Crisis Intervention Strategies (TCIS) and be expected to understand the content in an effort to implement de-escalation techniques, perform a Life Space Interview and execute (non-restrained certified) protective stances while a child may be in route or in crisis. Please ...

Family members who are coping with critical injuries often feel defeated, hopeless, and like a failure; therefore it is necessary to verbally praise them for their strengths and use those strengths to aid functioning. Determine the patient’s understanding of the stressful situation. Patients may believe that the threat is greater than their resources to handle it and feel a loss of control ...

Coping can be adaptive and it can also be useless and maladaptive. Coping is adaptive when it resolves the stress, and it is maladaptive when it does not resolve the stress and/or it creates further problems for the client. For example, alcoholism that results from a client's self medication to cope with the loss of a loved one not only does not resolve the stress associated with this ...
